Backend Screen Sketches

Tu Reh: 25% contribution

Haris Khan: 25% contribution

Frontend Screen Sketches

Ping Wu: 25% contribution

Bae Meh: 25% contribution

Actors (Haris)

1. Users
    - Interacts with the app to search, listen and rate tunes.
    - Be able to Create an account ,log in and view their rating history.
2. Admins
    - Manages app's content , including overseeing user activity, handling reported issues and managing tune data.
3. Content Moderator
    - Review User Submissions of flagged content.
    - Resolve Disputes by handling user reports.
4. Social media API
    - Share tunes or rating on social media platforms.

Non Functional Requirements (Haris)

1. The app should load pages in less than 3 seconds on average.
2. The app should handle multiple different users without significant performance degradation.
3. The system should support multiple reads and writes per second, ensuring that user reviews, ratings, and album metadata are processed in real time.
4. The app database should be growing constantly to account for new music being released
5. Low downtime while changes are being made
6. We will promptly find and address any bugs that come up

Tables (Haris)

- We will get our data from the Deezer api

User

- User id - primary key
- User name
- User email
- User username
- User password
- User profile pic

Friend

- Friend id - primary key
- User id

Music

- Album id - primary key
- Song id - primary key
- Album genre
- Album artist
- Album title
- Song title
- Album release date
- Album cover
- Album rating

Post

- Post id - primary key
- User id - foreign key
- Album id - foreign key
- Post contents
- Post album rating

- Post date

Message

- User id - foreign key
- Friend id - foreign key
- Message id - primary key
- Message contents
- Message date

ScreenFlow - Developer: Tu Reh

The flowchart for our application clearly outlines the user journey and admin functionalities. It starts with the user deciding to either log in or sign up. If they log in, they are taken to the Home Page, which is the main hub of the app. From there, users can update their profile, manage friends or followers, chat with friends, share and upload music, and rate tracks they've listened to. There's also an option to log out directly from the Home Page.

User Table:

- **Purpose:** Stores essential user details such as IDs, usernames, emails, passwords, and profile pictures.
- **Functionality:** Used for login authentication, profile management, and identifying users in other features (e.g., posts or chats).

User Authentication and Authorization:

- **Log In/Sign-Up:** Users can securely create accounts and log in using their email and password. This data is validated and stored in the database. Passwords are encrypted for security.
- **Admin Access:** Admins log in through a separate portal. Their elevated privileges are checked through role-based authentication.

New users follow a straightforward sign-up process, creating an account with their email and password. The user information will be stored in the user's table in the database. Where they will be able to access their account through login, after creation.

Chat Table:

- **Purpose:** Logs one-on-one chat messages between friends.
- **Functionality:** Facilitates real-time communication through WebSocket protocols.

Friend Table:

- **Purpose:** Tracks friendships between users.
- **Functionality:** Links users to their friends, allowing them to manage friend lists and initiate chats.

Admin Table:

- **Purpose:** Maintains admin credentials for secure access.
- **Functionality:** Validates admin login and enables access to moderation tools.

Admin Controls:

- Admins oversee content moderation, removing inappropriate material, banning users who violate guidelines, and managing flagged posts or reports.

The flowchart also includes an admin section with a separate login. Admins have specific privileges such as removing inappropriate content, deleting user accounts, and banning users who violate the rules. Admins cannot create an account, it is given to users.

By mapping out the different paths for users and admins, the flowchart provides a clear and organized view of the app's structure and features.

Songs Table:

- **Purpose:** Stores individual song details, linked to albums.
- **Functionality:** Supports detailed exploration of tracks within albums and their respective ratings.

Post Table:

- **Purpose:** Stores user-generated content, including album reviews, posts, and ratings.
- **Functionality:** Allows users to share their music experiences and rate tracks publicly.

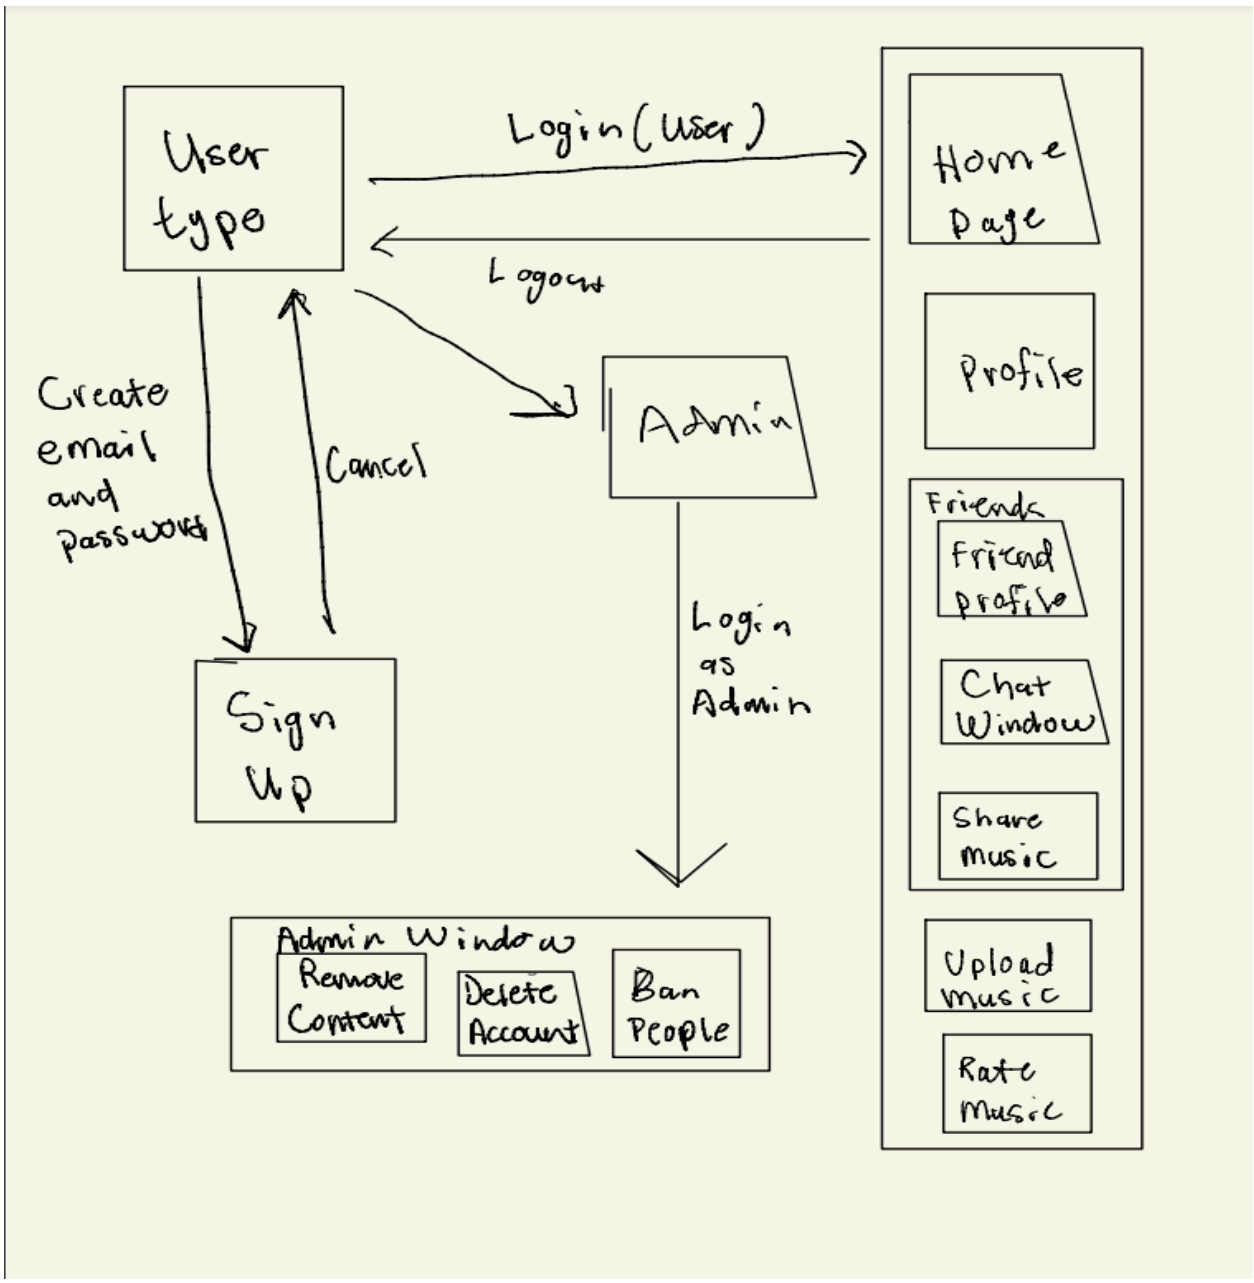
Rating Table:

- **Purpose:** Tracks user ratings for albums and songs.
- **Functionality:** Calculates average ratings and allows users to update their reviews.

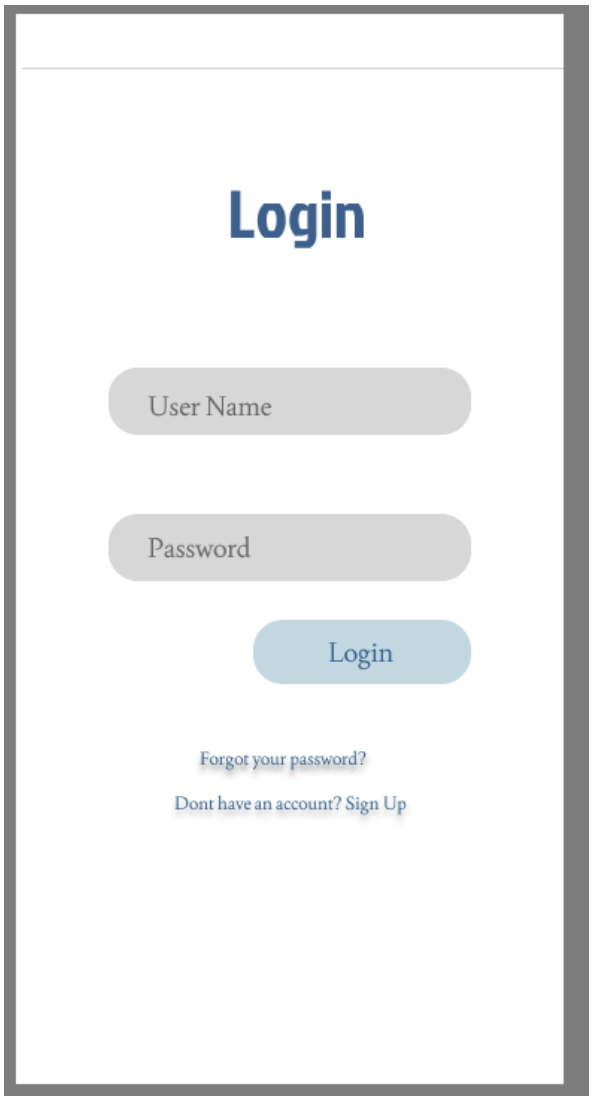
Name : Backend Screen Flow Sketch

Database Tables : User, Admin, Profile, Friend, Chat, Rating, Songs

Developer : Tu Reh



Pages



Name : LogIn Screen

Developed by: Bae Meh

Interface:

Username Field

- A text input field where users enter their username.

Password Field

- A password input field where users enter their password (masked by default).

Login Button

- A button labeled “Login” that the user clicks to submit their credentials.

Create Account Link

- A clickable link or button labeled “Create Account” that redirects the user to the SignUp screen if they don’t have an account.

Forgot Password Link

- A clickable link labeled “Forgot Password” that redirects the user to a password recovery process if their username and password don’t match or if they’ve forgotten their credentials.

Name: Forget Password Screen

Developer: Bae Meh

Interface:

Email Input Field

- A text input field where users enter their registered email address.

Send Link Button

- A button labeled “Send Link” that sends the password reset link to the user’s email upon submission.

Instructions Text

- Clear instructions displayed to guide users, e.g., “Enter your registered email address, and we’ll send you a link to reset your password. Please check your email after submission.”

Return to Login Link

- A clickable link labeled “Return to Login” that redirects users back to the Login screen if they remember their credentials.

Name: SignUp Screen

Developer: Ping Wu

Interface:

Email Address Field

- **A text input field where users enter their email address.**

Password Field

- **A password input field where users create a password (masked by default).**

Confirm Password Field

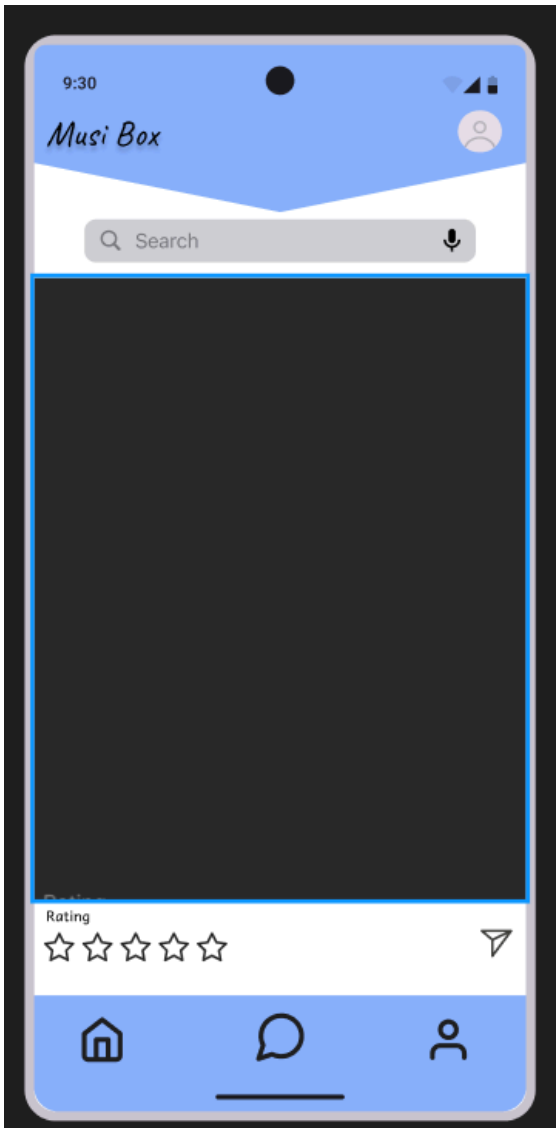
- **A second password input field where users re-enter the password to confirm it matches the first entry.**

Sign Up Button

- **A prominently displayed button labeled “Sign Up” that users click to create their account.**

Terms and Conditions Checkbox

- **A checkbox with a label such as “I agree to the terms and conditions” with a clickable link to view the terms and conditions.**



Name: Home Page

Developer: Ping Wu

Interface:

Search Bar

- **A search input field at the top of the screen allowing users to quickly search for content, users, or items.**

Central Content Area

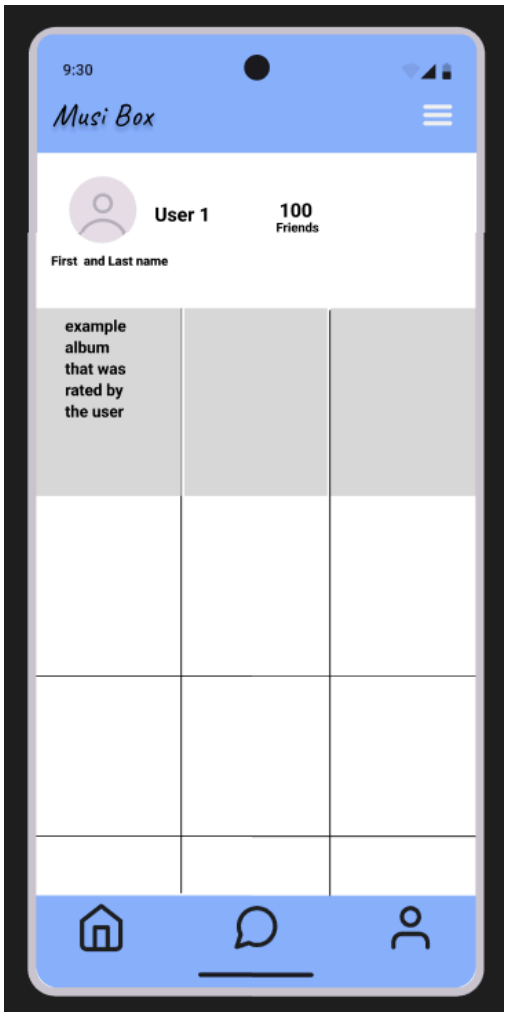
- **The main section showcasing key features such as recent updates, popular items, or personalized content for the user. This can include lists, cards, or banners displaying featured content.**

Bottom Navigation Menu

- **A fixed navigation bar at the bottom of the screen for easy access to different sections:**
- **Profile: Redirects users to their personal profile.**
- **Ratings: Allows users to view or give ratings.**
- **Messages: Takes users to their messages or inbox.**

Footer with Help and Support Links

- **A section at the bottom (above or within the navigation menu) containing links to help pages, FAQs, or customer support resources.**



Name: Profile Page

Developer: Ping Wu

Interface:

User Information Section

• Displays user-specific details such as the user's name, profile picture, and a brief bio.

Edit Profile Button

• A prominent button that opens a form for users to update their details.

User Activity Section

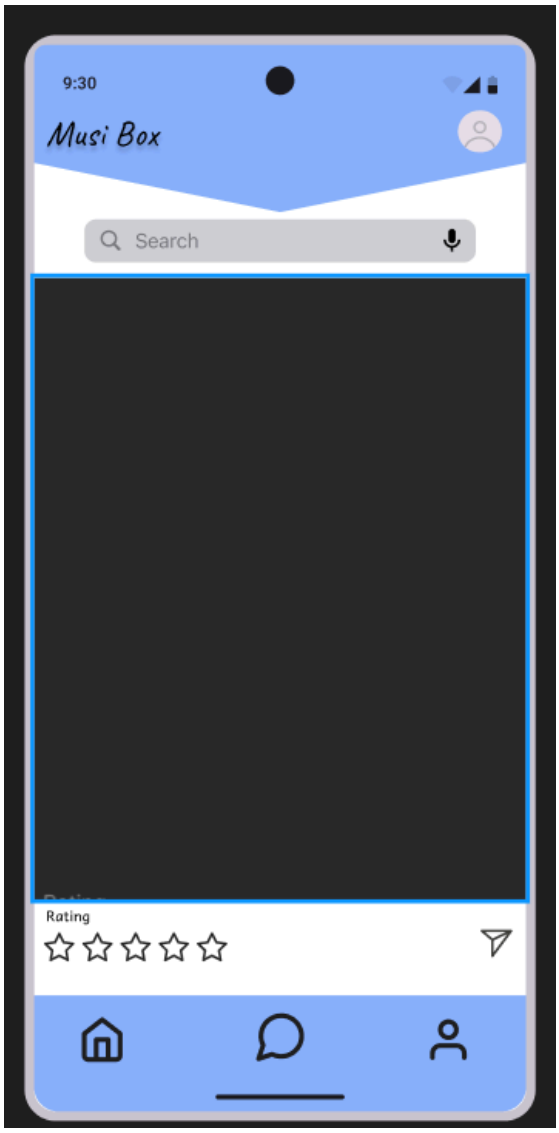
• Showcases recent ratings, achievements, and other user activities to keep users engaged.

Privacy Settings Options

• Provides users with control over their privacy preferences and settings.

Clear Layout and Navigation

• Ensures an intuitive user experience with easy access to all sections of the profile page.



Name: Rating Page

Developer: Ping Wu

Interface:

Star Rating System

• A visual system for users to select a score, typically ranging from one to five stars.

Comment Box

• A text input area where users can provide additional feedback or comments about their rating.

Instructions Section

• Clear guidelines on how to rate effectively, helping users understand the rating process.

Recent Ratings Display

• Shows the user's recent ratings and feedback from others for added context.

Submit Rating Button

• A prominent button that allows users to easily submit their rating and comment

Name: Friends Page

Developer: Tu Reh

Interface:

Friends List Display

• A visually appealing grid or list showcasing the user's current friends, making it easy to browse.

Profile Picture and Name

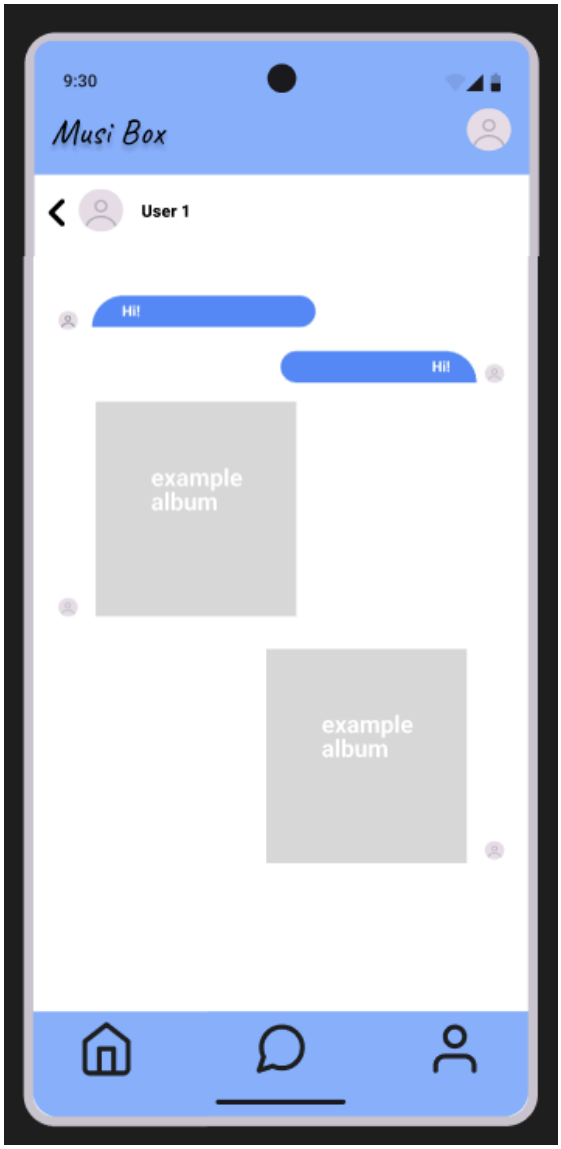
• Each friend's profile picture and name are prominently displayed for quick identification.

Action Buttons

• Simple click options to initiate actions such as sending a message or viewing a friend's profile.

Search Functionality

• An optional search bar for users to quickly find specific friends within the list.



Name: Message Page

Developer: Tu Reh

Interface:

Chat Window

• Displays the conversation history, with messages organized by sender for clarity.

Message Input Field

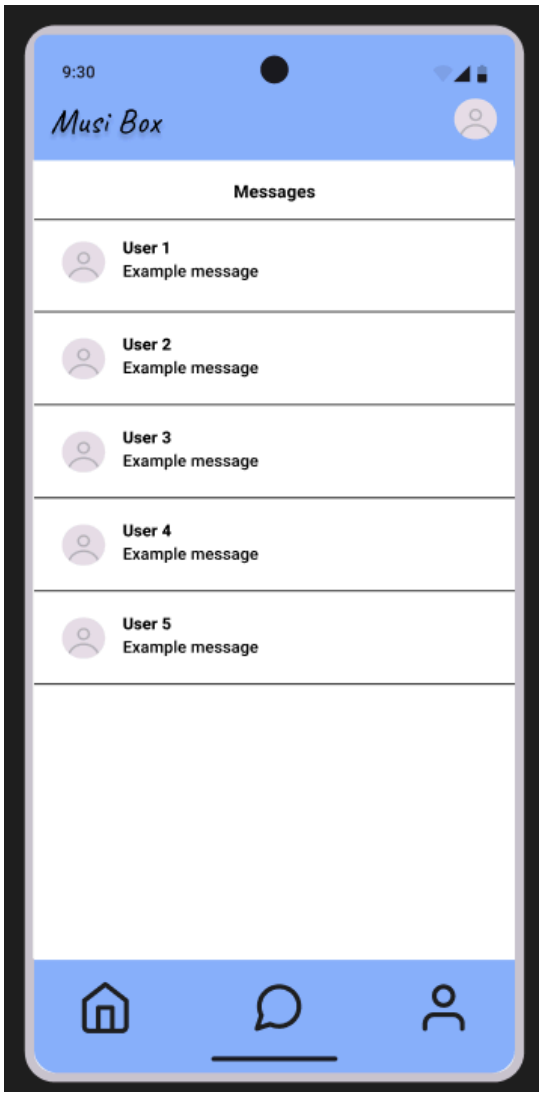
• An area at the bottom for users to compose new messages easily.

Attachment Options

• Features options to attach images or insert emojis to enhance communication.

User-Friendly Design

• Prioritizes a smooth and intuitive user experience, ensuring easy navigation throughout conversations.



Name: Inbox Page

Developer: Haris Khan

Interface:

Message List Display

• A list of recent messages showing sender names, snippets of content, and timestamps for quick reference.

Clickable Conversations

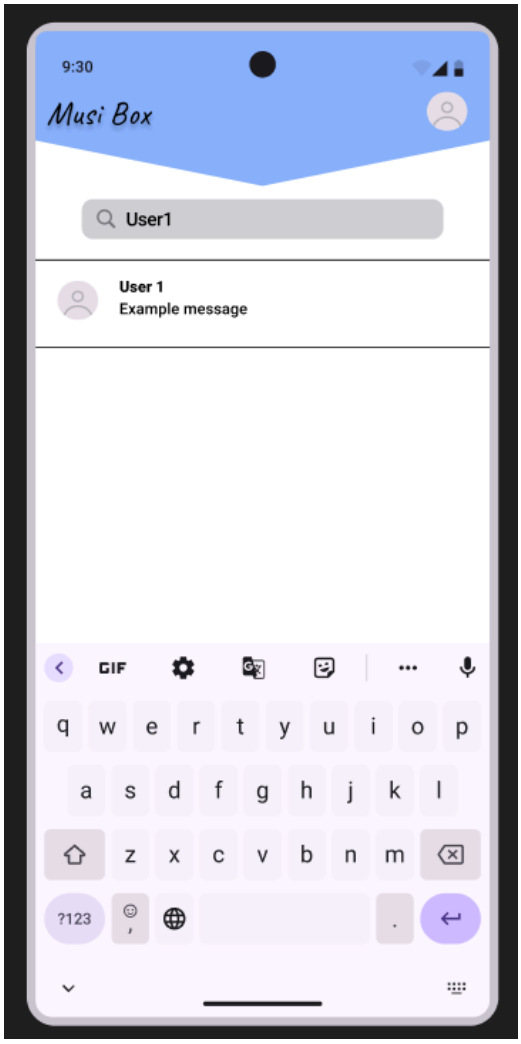
• Users can easily navigate to specific conversations by clicking on the message entries.

Filtering Options

• Features filters to sort messages by unread, starred, or important messages for better organization.

Notification Indicators

• Visual cues for unread messages to ensure users stay updated on new communications.



Name: Search Friends Page

Developer: Haris Khan

Interface:

Search Bar

• A prominent input field at the top for users to enter names or keywords to find specific individuals.

Suggested Friends List

• Displays a list of suggested friends based on mutual connections or common interests. Each entry includes profile pictures, names, and brief status indicators.

Quick Action Buttons

• Options to send friend requests or view profiles directly from the suggested friends list.

User-Friendly Design

• Intuitive layout ensuring easy navigation and a seamless experience for discovering new connections.
