    - Share tunes or rating on social media platforms.

Non Functional Requirements

1. The app should load pages in less than 3 seconds on average.
2. The app should handle multiple different users without significant performance degradation.
3. The system should support multiple reads and writes per second, ensuring that user reviews, ratings, and album metadata are processed in real time.
4. The app database should be growing constantly to account for new music being released
5. Low downtime while changes are being made
6. We will promptly find and address any bugs that come up

Tables

- We will get our data from the MusixMatch api

User

- User id - primary key
- User name
- User email
- User username
- User password
- User profile pic

Friend

- Friend id - primary key
- User id

Music

- Album id - primary key
- Album genre
- Album artist
- Album title
- Album release date
- Album cover
- Album rating

Post

- Post id - primary key
- User id - foreign key
- Album id - foreign key
- Post contents
- Post album rating
- Post date

Message

- User id - foreign key
- Friend id - foreign key
- Message id - primary key
- Message contents
- Message date

Screen Flow

The flowchart for our application gives a clear picture of the user journey and admin functionalities. It starts with the user deciding whether to log in or sign up. If they log in, they go to the Home Page, where they can view and edit their profile, manage friends or followers, chat with friends, share music, upload their own music, and rate the music they listen to. There's also an option to log out. For new users, the sign-up process involves creating an account with an email and password. The flowchart also includes an admin section with a separate login. Admins have special privileges like removing inappropriate content, deleting user accounts, and banning users who break the rules. This detailed flowchart maps out the different paths and functionalities for both regular users and admins, making the application's structure and navigation clear.

Pages

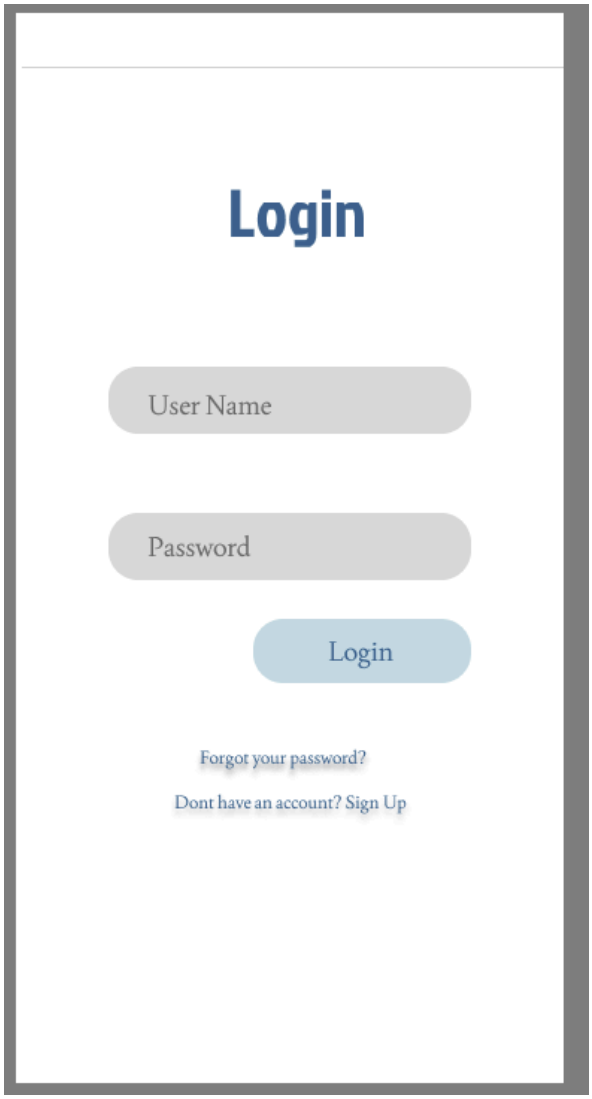

Figure 1. LogIn Screen

In this Login Screen users are prompted to login with their username and password.If the user

does not have an account they can click “Create account” which will take them to the SignUp screen. If the user already exists but password and username does not match , the user can retrieve the password through the “forgot password” link.

Figure 2. Forget Password Screen

The Forget Password Screen allows users to recover their accounts by entering their registered email address. It features a simple layout with a prominent input field for the email, accompanied by a "send link" button. Clear instructions guide users on the next steps after submission, such as checking their email for a password reset link. There is also a link to return to the login page for users who remember their credentials.

Figure 3. SignUp Screen

The SignUp Screen enables new users to create an account. It includes fields for essential information such as email address, password, and a confirmation password. A "Sign Up" button is prominently displayed, encouraging user action. Below the button, there’s an option to read the terms and conditions, as well as a link for users who already have an account to navigate to the login screen.

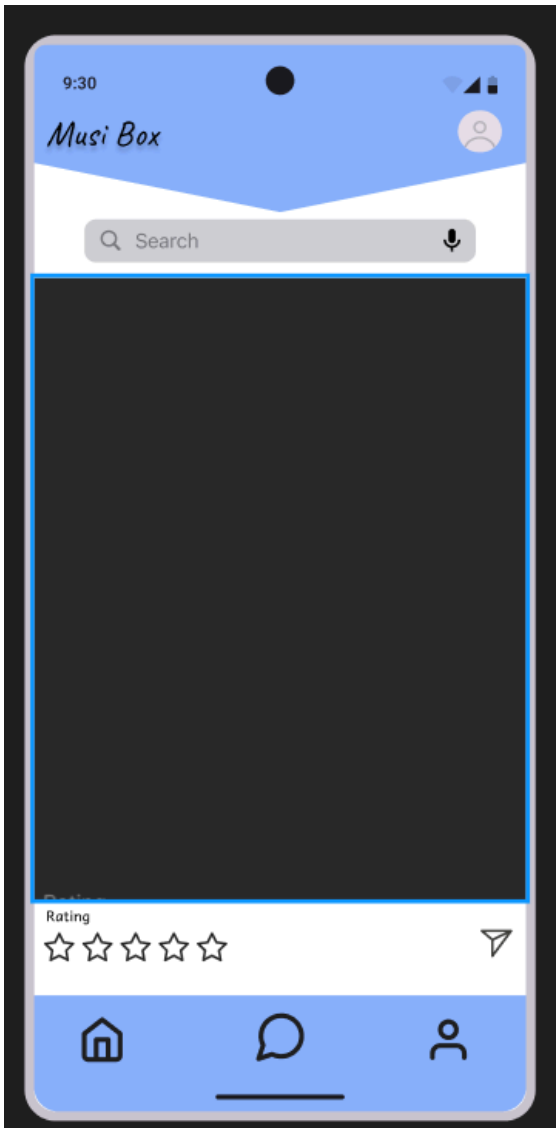

Figure 4. Home Page

The Home Page serves as the main dashboard for users, featuring a clean and intuitive design. It showcases a navigation menu at the bottom for easy access to different sections, such as Profile, Ratings, and messages. The central area highlights key content or features, such as recent updates or popular items, while the footer contains links to help and support resources. The top includes a search feature.

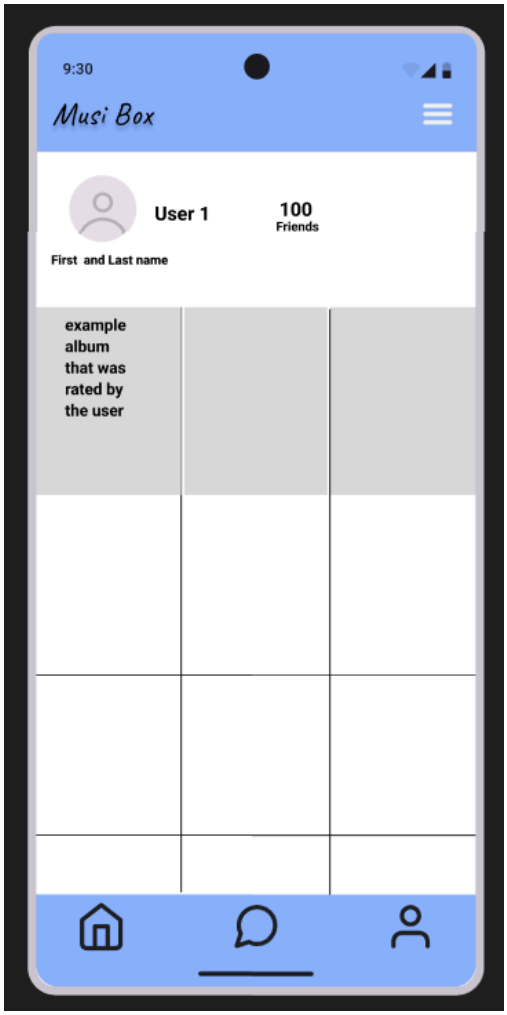

Figure 5. Profile Page

The Profile Page displays user-specific information, such as the user's name, profile picture, and a brief bio. Users can edit their details through an "Edit Profile" button, which opens a form for updates. The page may also feature sections for user activity, such as recent ratings or achievements, as well as options for privacy settings. A clear layout and easy navigation enhance the user experience.

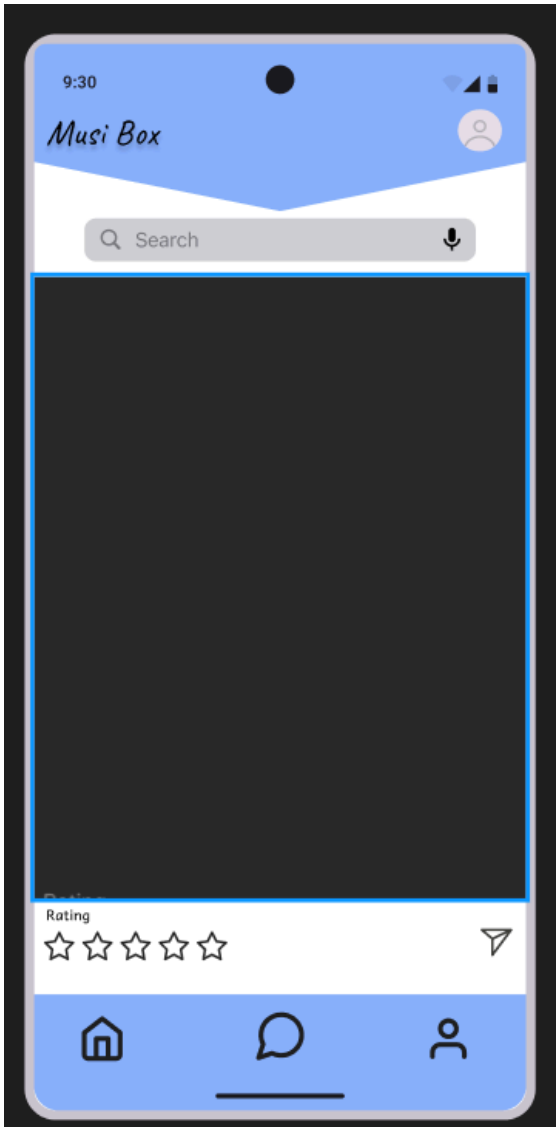

Figure 6. Rating Page

The Rating Page allows users to provide feedback on specific items or services. It includes a star rating system for users to select their score, along with a text box for additional comments. Instructions guide users on how to rate effectively. Recent ratings from the user and feedback from others may also be displayed for context. A "Submit Rating" button is prominently

featured, ensuring that the action is straightforward and accessible.

Figure 7. Friends Page

The Friends Page displays a list of the user's current friends, presented in a visually appealing grid or list format. Each friend’s profile picture and name are visible for easy identification. Users can initiate actions such as sending a message or viewing a friend's profile with a simple click.

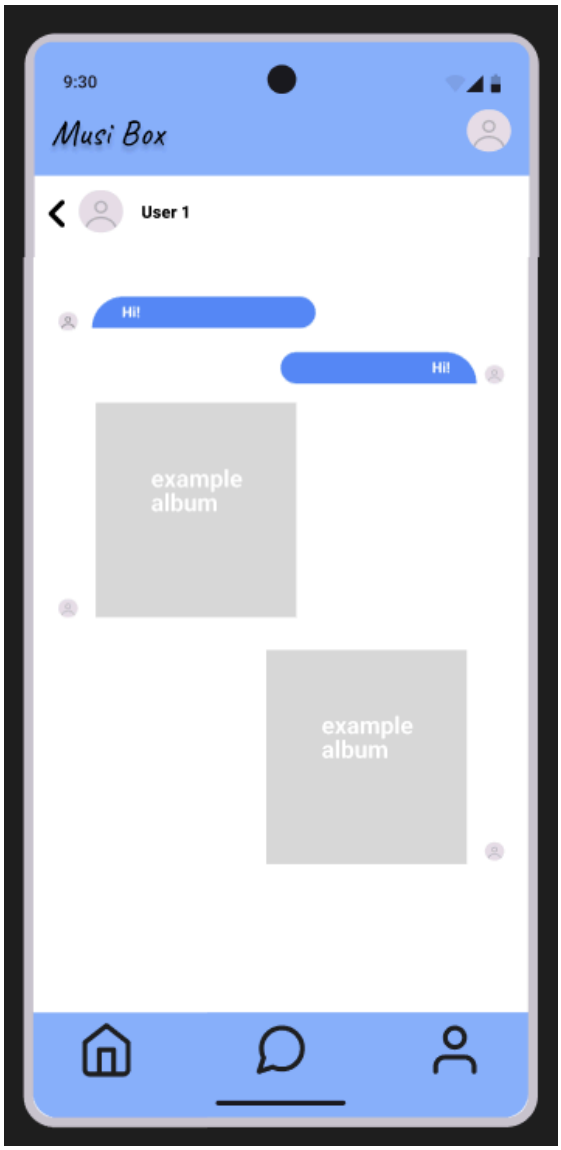

Figure 8. Message Page

The Message Page is where users can engage in one-on-one conversations. The layout includes a chat window displaying the conversation history, with messages organized by sender . At the bottom, there's an input field for composing new messages, accompanied by options to attach images or emoji. The design prioritizes ease of communication, ensuring a smooth user experience.

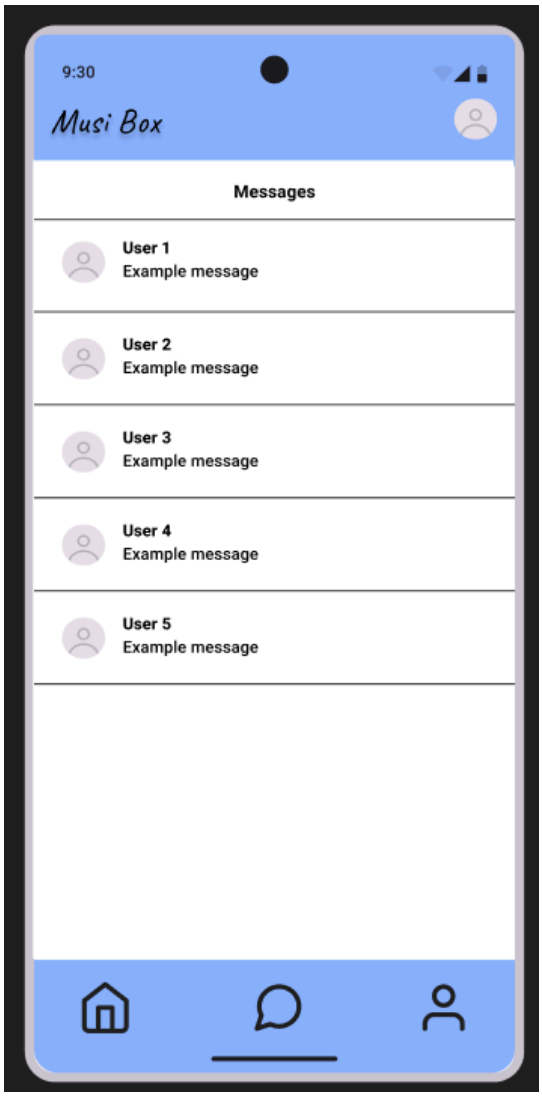

Figure 9 .Inbox Page

The Inbox Page serves as the central hub for all incoming messages and notifications. It features a list of recent messages, with sender names, snippets of message content, and timestamps for easy reference. Users can quickly navigate to specific conversations by clicking on them. The page may also include filters to sort messages by unread, starred, or important messages.

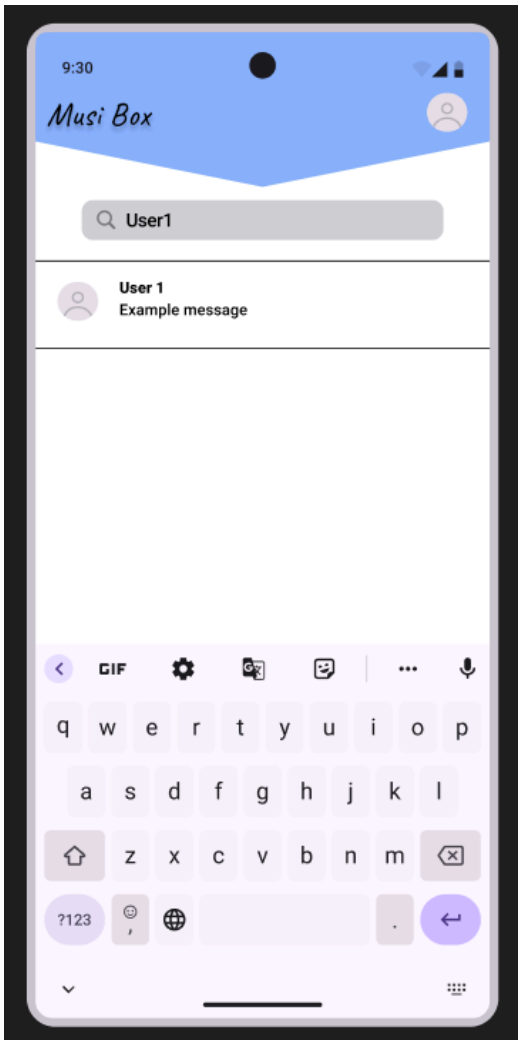

Figure 10. Search Friends Page

The Search Friends Page is designed for users to discover and connect with new friends. At the top, a prominent search bar allows users to enter names or keywords to find specific individuals. Below the search bar, a list of suggested friends appears, based on mutual connections or common interests, with profile pictures, names, and brief status indicators.
